

MCAC Members,

The Division of Medicaid and Health Financing (DMHF) is implementing a new Medicaid Management Information System to better serve providers and members. The new system is called PRISM (Provider Reimbursement Information System for Medicaid).

Release 3 focuses on Provider Enrollment and Electronic Medicaid Incentive Payment Program (eMIPP). Provider Enrollment allows new providers to enroll electronically in the Medicaid system and gives current providers an opportunity to begin using the PRISM system. eMIPP is the online PRISM software tool that will facilitate Medicaid providers' adoption of electronic health record systems. The Release 3 implementation date is July 1, 2016.

The final PRISM release, Release 4, replaces the current system and includes all remaining PRISM system functionality, including Medicaid Managed Care System (MMCS), the largest piece being claims adjudication and claims payment. The projected release implementation date is late 2017.

As the Outreach Specialist with Medicaid's PRISM Project, I provide a bridge between providers and PRISM staff to communicate information about the PRISM Project. I have provided presentations on PRISM to various meetings and trainings statewide. Consequently, 181 providers have signed up so far to test PRISM's Release 3. We welcome participation from additional providers statewide. You can email prism@utah.gov for the following:

- Signing up to help with Release 3 Provider Testing
- Requesting a PRISM presentation at an upcoming event or meeting
- Questions about PRISM

Do not hesitate to contact me with questions and/or comments about PRISM.

Regards,

Melanie Wallentine
